

aluminum braille overlay for handrails

Net price for 1 pc.: **35,16 EUR**

Gross price for 1 pc.: **43,25 EUR**

Quantity in package: **10**

Net price: **351,61 EUR**

Gross price: **432,48 EUR**

braille points are stamped from the bottom of the plate. In addition to braille information for the blind, we laser mark inscriptions for the visually impaired. Bending is performed individually after specifying the diameter of the handrail. The overlay is glued from the bottom with a very strong double-sided adhesive tape, which effectively prevents the plate from detaching from the handrail. Minimum order 10 pcs. The price includes detailed project development and braille translation.

we translate braille into your language and ship products to your country quickly. trust us

Braille handrail overlays are special overlays made of weather-resistant materials that are placed on handrails in public places such as office buildings, schools, museums, stations and airports. Their main purpose is to enable blind and visually impaired people to orientate themselves in space and move around buildings.

Braille overlays typically contain Braille and local language markings that inform users of floor numbers, directions, restroom locations, stairs, elevators, doors, information boards, and other important building features. Braille overlays are often mandatory in public places because they help ensure accessibility and equality for all people, regardless of their visual ability.
