Net price for 1 pc.: **2 900,00 PLN**

Gross price for 1 pc.: **3 567,00 PLN**

Quantity in package: **1**

Net price: **2 900,00 PLN**

Gross price: **3 567,00 PLN**

We present you a wall-mounted typhlographic board with a built-in system audio.

Typhlography boards are special boards designed based on the sense of touch. However, our boards also affect the sense of hearing and sight (sighted people).

They allow blind and visually impaired people to move safely and easily in the space of a given building. They are used in many public places: museums, art galleries, parks and hospitals. They enable blind people to access

information that would otherwise be completely unavailable to them. They make the building accessible to people with visual disabilities.

We design our boards in such a way that everyone can use them. A blind person uses Braille inscriptions and convex elements, thanks to which he or she can find the right room or, for example, the exit from the building by touch. Elderly people or children with visual impairments, who don't use Braille, will benefit from a built-in sound system that will help them find their way in a given space. Sighted people will appreciate the clear, minimalist design that will clearly show them the way to their destination.

The board we offer you includes, among others: rooms, routes and more important elements of the building tactily reproduced on the board using convex, tactile elements, descriptions in Braille made using special balls, as well as a simplified and clear legend.

Our board also has a built-in sound system. There are several on the board convex metal buttons; when pressed, it turns on a built-in speaker. We can hear the audio description of the entire floor and find out where we are and what rooms are on a given floor.

The most important features of our boards are simplicity, readability and a clear message.

The design is made in such a way as to describe and enable a given space to a blind person as precisely as possible so that he or she can move around completely independently. We want our boards to contain only the most necessary information and to be as readable as possible.

Our product is mounted on the wall at a height of approx. 110 cm (upper edge of the board) at an angle of 35 degrees so that the user can use it conveniently.

The board is ready for self-assembly. It is also possible to perform assembly by our company.

Our product is very visually attractive and eye-catching. It helps you find your way around the building also for sighted people.

It can be mounted outside and inside the building. We recommend mounting it close entrances.

The given price is the price of the audio system only (recordings and audio description up to 5 buttons). We estimate the price of a product after reviewing a given project, architectural projections, etc. It depends, among others on the complexity of the project and other individual factors.
