Typhlograph plan made of Corten steel  
Graphic design based on provided drawings/schematics.  
Steel thickness: 5 mm.  
Steel elements are laser-cut and welded to the substrate, also made of the same Corten steel.  
Steel beads are embedded in the substrate.  
Corten steel is highly resistant to corrosion and weathering.  
After approximately 1.5 years of use, a patina develops, taking on a rusty hue that darkens over the years.  
This surface requires little maintenance.
